

## INTERCONNECTION MODULES

# SAFEGATE M SG BOX OSSD

### GENERAL

---

The SAFEGATE M SG BOX OSSD modules are accessory devices designed to make the wiring of the SAFEGATE and SAFEGATE TRX barriers fast and safe, as well as provide the main controls necessary for their operation close to the protected gate.

In addition to OSSD safety static outputs, terminal blocks for connecting the cables, jumpers and dip-switches for the configuration of the barrier itself.

### DESCRIPTION

---

M SG BOX OSSD is characterized by:

- Luminous push-button for restart and output status indication.
- Key selector for Override function.
- Connectors for wiring the box to the barrier (M12-12-pole male for RX; M12-5-pole female for TX).
- Fairlead for the connections toward the machine of:
  - power supply;
  - connection with the output contacts of the internal safety relays and relative EDM;
  - Muting function enabling signals coming from outside;
  - output signals which indicate the status of the safety light curtain.

Figure 3 - M SG BOX OSSD – Connections and signals

**SELECTION OF MUTING MODE AND TIMEOUT (DIP-SWITCH SW1)**

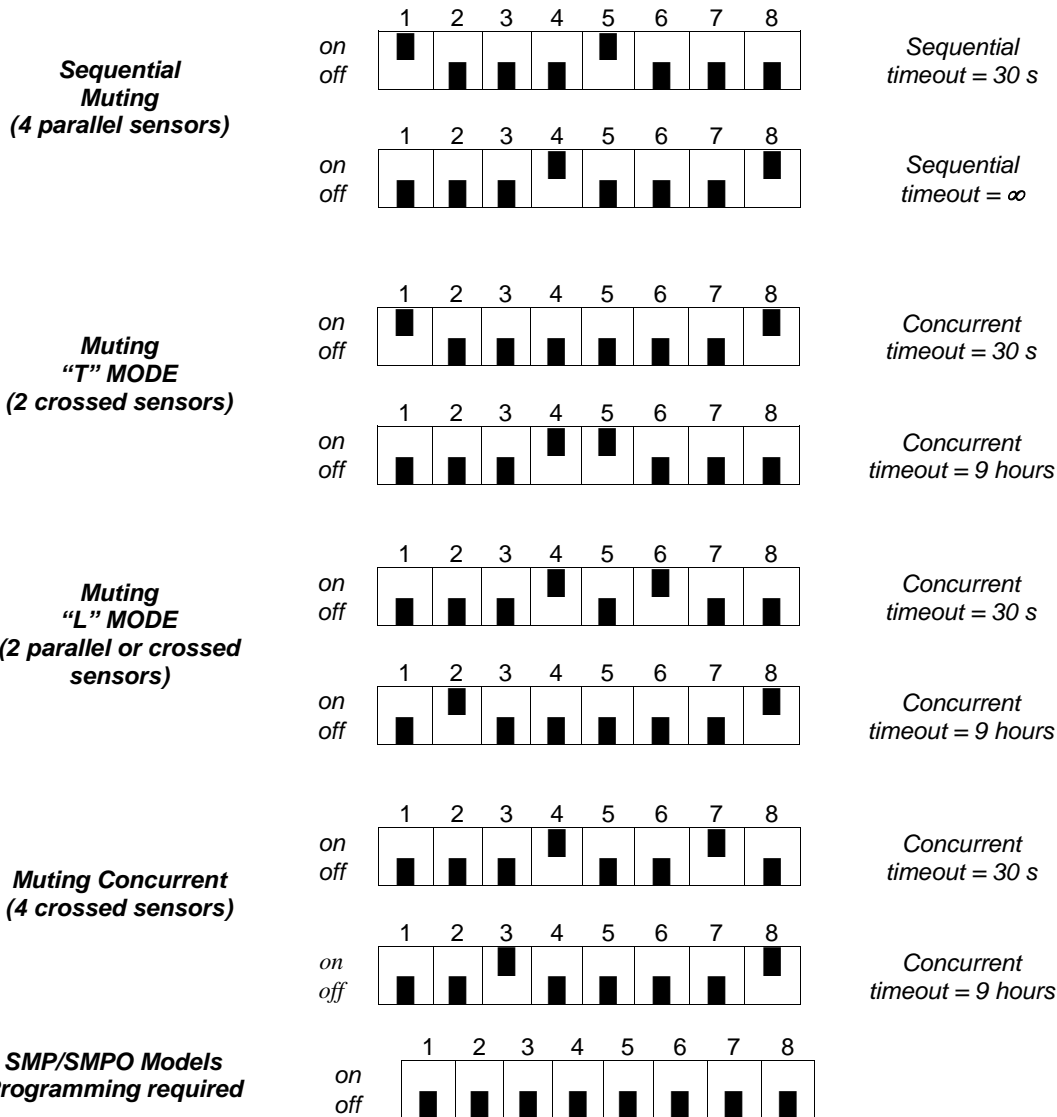

**Manual Mode**

<b>Sequential Muting</b> (4 parallel sensors)	on	1 2 3 4 5 6 7 8	Sequential timeout = 30 s
	off		
	on	1 2 3 4 5 6 7 8	Sequential timeout = ∞
	off		
<b>Muting "T" MODE</b> (2 crossed sensors)	on	1 2 3 4 5 6 7 8	Concurrent timeout = 30 s
	off		
	on	1 2 3 4 5 6 7 8	Concurrent timeout = 9 hours
	off		
<b>Muting "L" MODE</b> (2 parallel or crossed sensors)	on	1 2 3 4 5 6 7 8	Concurrent timeout = 30 s
	off		
	on	1 2 3 4 5 6 7 8	Concurrent timeout = 9 hours
	off		
<b>Muting Concurrent</b> (4 crossed sensors)	on	1 2 3 4 5 6 7 8	Concurrent timeout = 30 s
	off		
	on	1 2 3 4 5 6 7 8	Concurrent timeout = 9 hours
	off		
<b>SMP/SMPO Models</b> Programming required	on	1 2 3 4 5 6 7 8	
	off		

**OTHER CONFIGURATIONS NOT ALLOWED**

**Automatic Mode**

**⚠** If a time out limit of 9 hours is a too short time for a particular machine cycle, the configuration without time monitoring ( $t=\infty$ ) can be selected. In this case alternative solutions or additional measures shall be implemented to detected the condition of a muting function permanently active caused by accumulation of faults or by the muting sensors activated all the time. For example for the application of guarding the openings of a conveyor system (palletizers) by monitoring appropriate signals generated by the transport system to determinate if and when a pallet is in the detection zone.

**⚠** Perform a specific risk analysis of the application if the timeout  $t = \infty$  is selected.

**OTHER CONFIGURATIONS NOT ALLOWED**

**EDM, RANGE, MUTING ENABLE SELECTION (DIP-SWITCH SW2) (VIA HARDWARE)**

**Muting Enable Configuration (Dip-Switch SW2)**

**Feedback (EDM) enabled (Dip-Switch SW2)**

**Range Selection (All models – TRX excluded)**

**OTHER CONFIGURATIONS NOT ALLOWED**

**EDM, RANGE, MUTING ENABLE SELECTION (DIP-SWITCH SW2) (VIA SOFTWARE)**

➔ All settings of the Dip-Switch SW2 and the Jumper CJ9 must respect the configuration of the Safegate Software.

**Muting Enable Configuration (Dip-Switch SW2)**

**Feedback (EDM) enabled (Dip-Switch SW2)**

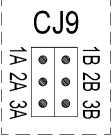

**Range Selection (All models – TRX excluded)**

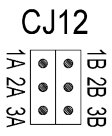

**OTHER CONFIGURATIONS NOT ALLOWED**

**VERRIDE SELECTION (CJ9)**

JUMPER	PIN	DESCRIPTION	SELECTION PRESET
	1A ↔ 2A 1B ↔ 2B	Override 1 (Hold to Run)	<b>Override 1 (Hold to Run)</b>
	2A ↔ 3A 2B ↔ 3B	Override 2 (Hold and Released)	

**SELECTION STATIC OUTPUTS (CJ12)**

JUMPER	PIN	DESCRIPTION	SELECTION PRESET
	1A ↔ 2A 1B ↔ 2B	Static outputs	<b>Static outputs</b>
	2A ↔ 3A 2B ↔ 3B	Selection not allowed	

**INSTALLATION AND ELECTRIC CONNECTIONS**

- The M SG BOX OSSD modules can be fixed to the wall, using the proper plastic brackets inserted in the holes placed on the box rear side corners. These brackets can easily rotate to reach 90°.
- The light curtain must be connected to the respective connectors M12 (Fig.1) using the dedicated cables.
- The cables coming out from the cable gland (PG11) must be connected - depending on its utilization - to the connectors CJ2 and CJ3. Terminal tightening torque: 4,4lb-in (0,5 Nm) is mandatory.
- Use 60/75°C copper (Cu) conductor only. Wire size range: AWG 12÷30, (solid/stranded) (UL).
- The working temperature is: -25°C ÷ 55°C.

Terminal board CJ2		
CLAMP	NAME	DESCRIPTION
1	+24Vdc	24 ± 20%
2	0V	0 Vdc
3	PE	Protective Earth
4	STATUS	(Ref. SAFEGATE Technical Manual)

Terminal board CJ3		
CLAMP	NAME	DESCRIPTION
1	OSSD1	Output – Barrier OSSD
2	OSSD2	Output – Barrier OSSD
3	K1_K2	Feedback external relays K1/K2 input
4	MUTING_ENABLE	Muting Enable Input
5	SEL_A	Refer to the manual of the connected barrier
6	SEL_B	Refer to the manual of the connected barrier

**SIGNALS**

SIGNAL	CONDITION	MEANING
OUTPUT STATUS <i>(White)</i>	ON	Outputs active
	OFF <b>(Low intensity blinking)</b>	Light curtain occupied: outputs disabled
MUTING OVERRIDE <i>(Yellow)</i>	ON	Muting function (or Override) active
	OFF	Normal operation

**SAFETY STATIC OUTPUTS TECHNICAL DATA**

The M SG BOX OSSD module uses two safety static outputs (OSSD) for the output circuit. The technical data of the outputs are reported on the following table.

SAFETY STATIC OUTPUTS TECHNICAL DATA	
Safety Outputs (OSSDs)	2 PNP – 400mA @ 24VDC
STATUS Output	PNP – 100mA @ 24VDC (shows the condition of the OSSD outputs)

**MECHANICAL DIMENSIONS**

All dimensions are expressed in mm

## INDICATIONS AND INFORMATION FOR ENVIRONMENTAL PROTECTION

---

Dispose of the product in an eco-compatible manner and in accordance with national legislation.

***For Countries in the European Union:***

***Pursuant to the Directive no. 2012/19/EU on waste electrical and electronic equipment (WEEE)***

The crossed out wheeled-bin symbol on the equipment or its packaging means that when the product reaches the end of its useful life it must be collected separately from other waste.

Proper separate collection of the discarded equipment for later environment-friendly recycling, processing and disposal, helps to avoid any negative impact on the environment and health and encourages re-use and recycling of the materials the equipment is made of.

In each individual Member State of the European Union this product is required to be disposed of in accordance with Directive **2012/19/EU** as implemented in the Member State where the product is disposed of.

For further information please contact ReeR or your local dealer.

Precise, complete compliance with all standards, instructions and warnings in this handbook is essential for the correct operation of the device.

ReeR S.p.A. therefore declines any responsibility for all and anything resulting from failure to comply with all or some of the aforesaid instructions.

*Characteristics are subject to change without prior notice. No part of this document may be reproduced unless authorised by ReeR.*
